SHIFT

DIGITAL ESCAPE ROOM EXPERIENCES

SERIOUS OUTCOMES. SERIOUSLY FUN.

THE SYNDICATE

INFILTRATE A MAFIA GANG. DON'T GET CAUGHT.

1 PLAYER • 45 MINUTES

The DiMarco family have built a cybercrime network hidden behind layers of encryption, fake identities and silent payoffs. Your mission? Infiltrate the operation from the inside and expose the truth — without getting caught.

This solo mission drops you into a cinematic chat-driven experience where every decision matters, every clue could be a trap, and every message pushes you deeper into a web of blackmail, lies and digital footprints.

You'll be guided by Nico "The Owl" — an insider who's risking everything to help you bring the syndicate down.

Together, you'll decode shady comms, crack portals, inspect digital evidence, and follow breadcrumbs buried deep in encrypted conversations.

Delivered via a slick web app, the experience needs no setup, no downloads, and works perfectly for remote teams or solo learners.

LEARNING OUTCOMES

Insider Risk
Understand how trust can be manipulated from the inside.

Social Engineering
See how attackers exploit human behaviour to gain access.

Password Security
Learn why using unique, strong passwords matters more than ever.

Digital Footprint
Discover how tiny traces online can reveal far more than intended.

WHAT TO EXPECT

This is our first digital native scenario, so you can expect high-pressure decision making, encrypted puzzles, character-driven storytelling. All held together with a twisty narrative that unfolds message by message.

THE BREACH

AN IMMERSIVE WHODUNNIT EXPERIENCE
1 PLAYER • 30 MINUTES

A ransomware attack has locked down your organisation's systems — and the attackers are in a playful mood.

They claim they only needed one stolen login to get in… and they're daring you to work out whose slip-up caused it.

Crack the correct combination and the hackers will hand over the decryption key. Get it wrong? Well — they did say they were playing games.

You'll dig through suspicious IT logs, phone records, fake intranet pages, and internal emails … all designed to throw you off the scent. Expect red herrings, fake profiles, interactive phone calls, and some extremely questionable password habits.

Everything plays out through a slick chat-style interface, built for quick decisions, fast thinking, and real-world cyber pressure… without needing to download a thing.

LEARNING OUTCOMES

📞 **Social Engineering**
Spot vishing attack techniques, and hear them in action

🌐 **Social Media Privacy**
Understand how oversharing online hands attackers everything they need

Role-Based Attacks
See how attackers might target specific roles and understand your threat profile

☆ **Everyone's Responsible**
Recognise that security isn't just IT's job, it's for everyone to consider.
