

THE BREACH

AN IMMERSIVE WHODUNNIT EXPERIENCE

You'll analyse IT logs, phone records, internal emails, digital footprints and dodgy clues left behind a cunning attacker.

You'll get physical kit, CCTV images, social media profiles, interactive phone calls, and some truly questionable password practices.

Crack the case and they'll hand over the decryption key. Get it wrong? Game over.

A ransomware attack has locked down High Tech Inc's systems and the hackers are playing games. Literally.

They claim they only needed one set of stolen credentials to get in. Now they've handed you five suspects, five methods of compromise, and five locations.

Call the hacker.

Want a preview? Call Viper from The Breach Collective to hear her for yourself. Be careful though... She might bite.

LEARNING OUTCOMES

Social Engineering

Spot vishing attack techniques, and hear them in action.

Social Media Privacy

Understand how over sharing online arms attackers with data.

Role Based Attacks

See how attackers target specific roles and understand your profile.

Everyone's Responsible

Recognise that security isn't just IT's job, it's for everyone to consider.
