

# THE HEIST

## FLIP THE SCRIPT, BE THE HACKERS

A lost rucksack on a train platform might not sound dramatic until you discover it belongs to a high-flying CEO... and it's overflowing with sensitive information.

As part of The Breach Collective, your job is simple: exploit everything you can find.

The CEO's digital life is wide open. Their passwords? Questionable. Their social media? Even worse. Their device security?

Let's just say, you're about to have some fun.

With real devices (yes, actual laptops... not props), your team will dig through digital clues, crack passwords, and uncover just how exposed someone becomes when security slips.

You'll hunt for financial details, spot OSINT weaknesses, and pull off the ultimate heist.

**AN EXPERIENCE THAT GENUINELY CHANGES BEHAVIOUR.**

— Scottish Power

## LEARNING OUTCOMES

### Think like an attacker

See how threat actors exploit careless behaviour and weak digital habits

### Social Media Privacy

Understand how over sharing online arms attackers with data.

### Password Hygiene

Experience first hand why weak passwords are an easy win for criminals

### Asset Management

See the consequences of lost devices and why reporting them quickly matters
